# Acerca de Roca

About Roca

## **Vocación global**

Roca es una empresa dedicada al diseño, la producción y la comercialización de productos para el espacio de baño, pavimentos y revestimientos cerámicos destinados a la arquitectura, la construcción y el interiorismo. El Grupo, de capital íntegramente español, es líder del mercado en Europa, Latinoamérica, India y Rusia. Además tiene una fuerte presencia en China y el resto de Asia, Oriente Medio y África. Roca es líder mundial en su actividad.

## **Global vocation**

Roca is a company devoted to the design, production and sale of products for bathroom areas and floor and wall tiles for use in architecture, construction and interior design. The Group, which is entirely Spanish owned, is market leader in Europe, Latin America, India and Russia. It also has a strong presence in China and the rest of Asia, the Middle East and Africa. Roca is world leader in its activity.

---

## Respeto por el medio ambiente

El modelo de gestión empresarial de Roca, basado en la plena conciencia medioambiental y el respeto del entorno, le ha llevado a convertirse en la primera industria española del sector de pavimentos y revestimientos cerámicos que ha conseguido la Autorización Ambiental Integrada (AAI) y certificados de calidad como ISO 14001, ISO 14021.

## Respect for the environment

The Roca's business management model, based on full environmental awareness and respect for its surroundings, which has led it to become the first Spanish industrial firm in the floor and wall tile sector to achieve the Integrated Environmental Authorisation (AAI) and quality certificates such as ISO 14001, ISO 14021.

---

## La cerámica integralmente ecológica

Greentiles es la materialización de la firme voluntad de Roca de respetar el medio ambiente, una voluntad que va mucho más allá de lo establecido por la legislación vigente.

A través de Greentiles, Roca comunica que su compromiso con el medio ambiente está presente en todos los productos y todas las etapas de su proceso de fabricación, desde el diseño inicial hasta la producción final, pasando por la distribución y el ciclo de vida del producto.

## Entirely green tiles

Greentiles embodies Roca's strong desire to respect the environment, a desire that goes far beyond the provisions of current legislation. Through Greentiles, Roca gives notice that its commitment to the environment is present in all its products and at all stages of its manufacturing process, from the initial design to final production, including distribution and the product lifecycle.

For rectangular and large formats (side larger than 60 cm) the use of a leveling system such as wedges are recommended to ensure a correct installation.

Para formatos rectangulares y/o de gran formato (lado mayor de 60 cm) se recomienda el uso de sistemas nivelados como campanas o cuñas para garantizar una correcta colocación.

For rectangular and large formats (side larger than 60 cm) the use of a leveling system such as wedges are recommended to ensure a correct installation.

Para formatos rectangulares y/o de gran formato (lado mayor de 60 cm) se recomienda el uso de sistemas nivelados como campanas o cuñas para garantizar una correcta colocación.

For rectangular and large formats (side larger than 60 cm) the use of a leveling system such as wedges are recommended to ensure a correct installation.

Para formatos rectangulares y/o de gran formato (lado mayor de 60 cm) se recomienda el uso de sistemas nivelados como campanas o cuñas para garantizar una correcta colocación.

## Propiedades Antideslizante

Non-slip properties

Las propiedades antideslizantes de la cerámica fabricada por Roca se clasifican en función del ensayo que se utilice

MÉTODO	DESCRIPCIÓN
PÉNDULO (ENV 12633)	Simula un zapato que oscila sobre el azulejo.
RAMPA (DIN 55130 y 51097)	Sitúa a la persona sobre una plataforma de azulejos, dicha plataforma se va inclinando hasta resbalar.
ASTM C1028	Simula el deslizamiento por arrastre de una pesa sobre el azulejo.
TORTUS (ISO-10545/17A)	Se realiza con un aparato mecánico que se desplaza a velocidad constante.
DECOF (ANSI 137.1)	

Los métodos de ensayo no son equivalentes entre si, debido a las propias características del ensayo. No obstante, cuanto mayor sea el valor obtenido, más antideslizante será el producto.

Es muy importante seleccionar bien las propiedades antideslizantes del material en función del uso final.

En la siguiente tabla se detallan los valores en función de cada ensayo. Los valores indicados en esta tabla son orientativos y por eso Roca recomienda el uso de las Fichas Técnicas del producto que se facilitan a través de nuestra red comercial, para un conocimiento mejor del producto que facilite una elección más acertada.

The non-slip properties of Roca's ceramic tiles are classified according to the test used:

METHOD	DESCRIPTION
PÉNDULO (ENV 12633)	Simulates a shoe swinging across the tile.
RAMP (DIN 55130 and 51097)	Places the person on a platform of tiles which tilts until the person slips.
ASTM C1028	Simulates the dragging of a weight over the tile.
TORTUS (ISO-10545/17A)	Performed with a mechanical apparatus which moves at a constant speed.
DECOF (ANSI 137.1)	

The diversity of test methods used means that the same diversity exists with regard to the recommended use, since the methods are not comparable between themselves, although it is true that the greater the value obtained, the greater the non-slip rating of the product.

It is very important to select the non-slip properties of the material in accordance with the intended use.

The following table shows the values according to each test. The values shown in this table are orientative, and therefore Roca recommends using the Technical Sheets of the product provided by our commercial network to gain better knowledge of the product in order to facilitate the most appropriate choice.

## Grupos de utilización Roca

Roca use groups

Antes de seleccionar el producto para una instalación se aconseja siempre verificar el grupo de pertenencia del mismo respecto a la aplicación que se vaya a dar.

Para facilitar esta tarea Roca ha elaborado unos grupos de utilización; es una clasificación orientativa y general, basada en la norma de Abrasión Superficial (ISO 10545-7), la escala Mohs (EN-101), la Resistencia Manchas (ISO 10545-14), la Resistencia Química (ISO 10545-13) y la norma de Abrasión Profunda (ISO 10545-6). Con esto los productos Roca están clasificados a modo de guía de ayuda. Dependiendo de las condiciones de uso, el profesional decidirá el producto adecuado en cada caso.

GRUPO	CARACTERÍSTICAS
	Para zonas de muy poco tránsito
	Para zonas de poco tránsito
	Para zonas de tránsito moderado
	Para zonas de mucho tránsito
	Pavimentos para tránsito intenso
	Porcelánicos pulidos. Para zonas de mucho tránsito (p. 206)

La elección de productos antideslizantes se puede realizar a través del apartado 'Propiedades Antideslizantes'.

Roca recomienda el uso de las Fichas Técnicas del producto que se facilitan a través de nuestra red comercial o en nuestra página web ([www.rocatile.com](http://www.rocatile.com)), para un conocimiento mayor del producto y una elección más acertada.

Aunque la responsabilidad final de la elección de la cerámica Roca es del usuario y de la dirección de la obra, el equipo comercial y técnico de Roca está dispuesto a asesorarle en la elección del producto cerámico.

Before selecting the product for an installation, it is recommended always to check the group to which it belongs with regard to its intended application.

To facilitate this task, Roca has drawn up a list of use groups, which is a general orientative classification based on the Surface Abrasion standard (ISO 10545-7), the Mohs scale (EN-101), Stain Resistance (ISO 10545-14), Chemical Resistance (ISO 10545-13), the Deep Abrasion standard (ISO 10545-6). In this way, Roca's products are classified for guidance. Depending on the conditions of use, the professional will decide on the most suitable product.

GROUP	CHARACTERISTICS
	For zones with very little traffic
	For zones with little traffic
	For zones with moderate traffic
	For zones with high traffic
	Floorings with intense traffic
	Polished porcelain tiles. For zones with high traffic (p. 206)

The choice of non-slip products can be made in accordance with the 'Non-Slip Properties' Section.

Roca recommends the use of the Product Specification Sheets available through our commercial network or on our website ([www.rocatile.com](http://www.rocatile.com)), in order to be more familiar with the product and make the most suitable choice.

Although the final responsibility of the choice of the Roca ceramic tile lies with the user and the works management, Roca's commercial and technical staff will be pleased to advise you on the choice of the ceramic product.

## Recomendaciones de colocación

### Laying recommendations

Una colocación adecuada y cuidadosa de los productos fabricados por Roca es vital para hacer resaltar al máximo las características técnicas de los mismos. Por este motivo, es necesario:

- 1- Verificar el calibre, tono y calidad del producto, antes de la colocación.
- 2- Escoger herramientas de instalación adecuadas (llana dentada, maza de goma blanda, ventosa y llana de goma para la aplicación de la junta).
- 3- Que la superficie sobre la cual vaya a instalarse el material esté nivelada, limpia y aislada de la humedad.
- 4- Prestar especial atención al tipo de adhesivo a utilizar (consultar con el proveedor habitual de adhesivos), dado que cada tipo de cerámica requiere el adhesivo adecuado. (Norma de referencia: EN-1348).
- 5- Para formatos rectangulares y/o de gran formato (lado mayor de 60 cm) se recomienda el uso de sistemas nivelados como campanas o cuñas para garantizar una correcta colocación.
- 6- El profesional responsable de la colocación del material, debe elegir adecuadamente las juntas entre piezas, así como las juntas perimetrales, de manera que se garantice una correcta absorción de movimientos estructurales, y una compensación de tolerancias dimensionales del producto. Roca Cerámica recomienda colocar la cerámica con una junta mínima de 1 mm y comprobar si en la caja hay otras indicaciones (medidas entre calibres o junta recomendada).
- 7- No se debe utilizar junta de color que contenga negro de humo (carbón micronizado), ni tintes que pueden dificultar la limpieza de la superficie revestida.
- 8- Limpiar los restos de rejuntado de la superficie de las baldosas cuando aún están frescos, utilizando una esponja con agua limpia; en ningún caso deben utilizarse materiales que presenten alta dureza y puedan rayar el producto cerámico tales como espátulas metálicas o estropajos abrasivos. Siempre se deben seguir las recomendaciones indicadas por el fabricante de adhesivos.
- 9- Una vez colocado el azulejo, hay que evitar las operaciones en la zona alicatada (enyesado, pintura, colocación andamios/escaleras, proyección de restos metálicos de radiales, trasiego de herramientas, arrastre de objetos pesados, resto de materiales abrasivos de obra, etc.), en caso contrario, siempre hay que proteger las baldosas y las juntas para evitar posteriores problemas de limpieza o deterioro. El material que se use para esta protección, no debe dañar ni contener productos químicos que dañen al azulejo.

#### Especial para mosaicos:

Para conseguir el efecto mosaico, las piezas deben rejuntarse en su totalidad. La colocación de los mosaicos Roca es sencilla y rápida.

#### Especial para las series destonificadas:

Para obtener un excelente acabado estético en cuanto al diseño y apreciar todas sus cualidades, Roca recomienda que se mezclen baldosas del mayor número de cajas posible antes de iniciar la instalación.

#### Especial Colocación de Peldaños:

El soporte estructural debe estar totalmente limpio y enrasado en superficie. Empezar la colocación desde arriba hacia abajo.

Es imprescindible no dejar zonas sin cemento cola.

Macizar completamente el hueco entre la pared y el borde interior del peldaño.

Colocar siempre la tabica (contra-huella) al mismo nivel que el peldaño.

Se recomienda la protección del peldaño durante la obra.

Se deben evitar golpes directos a los peldaños durante la obra y una vez instalados.

#### Especial Colocación de formatos rectangulares:

La colocación a rompejunta de formatos rectangulares nunca debe realizarse en la mitad de la pieza.

Se aconseja que para mantener la estética y evitar dificultades en su instalación, la colocación a rompejunta no supere el 25% del lado sobre el que se aplica.

Para formatos rectangulares y/o de gran formato (lado mayor de 60 cm.) se recomienda el uso de sistemas de nivelación como campanas o cuñas para garantizar una correcta colocación.

Correct, careful laying of Roca's ceramic products is vital for taking full advantage of their technical characteristics. For this reason, the following points are necessary:

- 1- Check the calibre, tone and quality of the product before laying.
- 2- Choose appropriate installation tools (toothed trowel, white rubber hammer, suction grip and rubber trowel for pointing).
- 3- Ensure that the surface on which the material is to be laid is level, clean and insulated from damp.
- 4- Pay special attention to the type of adhesive to be used (consult the habitual adhesive supplier), since each type of ceramic requires the appropriate adhesive. (Standard of reference: EN-1348).
- 5- For rectangular and/or large formats (side larger than 60 cm) the use of a leveling system such as wedges are recommended to ensure a correct installation.
- 6- The professional responsible for laying the material must choose the appropriate joints between pieces and the perimeter joints, in order to guarantee correct absorption of structural movements, and an allowance for dimensional tolerances of the product. Roca Cerámica recommends laying the tiles with a minimum joint of 1 mm and checking for other indications given on the box (measurements between calibres, recommended joint).
- 7- Do not use coloured pointing material containing black smoke (micronised carbon) or dyes which can hamper the cleaning of the tiled surface.
- 8- Clean off excess pointing material from the surface of the tiles when it is still fresh, using a sponge and clean water; never use hard materials that could scratch the tiles, such as metal spatulas or abrasive scourers. Always follow the recommendations given by the adhesive manufacturer.
- 9- Once the tiles are laid, avoid working in the tiled zone (plastering, painting, placing scaffolds/ladders, projecting metallic fragments from disc grinders, moving tools, dragging heavy objects, moving remains of abrasive building materials, etc.) If this cannot be avoided, always protect the tiles and joints to prevent problems of cleaning or deterioration. The materials used for this protection must not be harmful or contain chemical products which may damage the tiling.

#### Special for mosaics:

To achieve the mosaic effect, the pieces must be completely pointed.

#### Special for the shade variation series):

To obtain an excellent aesthetic finish in terms of design and to appreciate all of its qualities, Roca recommends mixing tiles from the greatest possible number of boxes before commencing installation.

#### Special for laying steps:

The substrate must be perfectly clean and smooth.

Begin laying from the top downwards.

Do not leave any zones without cement glue.

Fill completely the gap between the wall and the lower edge of the step.

Always place the riser at the same level as the step.

It is recommended to protect the step surfaces while working.

Avoid direct blows to the steps both during and after installation.

#### Special for laying rectangular formats:

When laying rectangular formats discontinuously, never do so in the centre of the piece.

In order to maintain the aesthetic appearance and avoid difficulties in installation, we recommend that discontinuous laying does not exceed 25% of the side to which it is applied.

For rectangular and large formats (side larger than 60 cm) the use of a leveling system such as wedges are recommended to ensure a correct installation.

## Mantenimiento

### Entretien

Para mantener la belleza y elegancia de la cerámica Roca, se aconseja la limpieza periódica del material, con sistemas convencionales.

Para la eliminación de restos de polvo y sólidos: por barrido o aspiración.

No se debe utilizar mopas atrapapolvo con siliconas y ceras.

El lavado de la superficie se debe realizar con jabón neutro y la cantidad de agua caliente recomendada por el fabricante.

No se deben usar productos de limpieza abrillantadores, cerosos o con aditivos similares ya que con el paso del tiempo pueden dejar una capa impermeabilizante sobre la cerámica que altera el aspecto superficial de la misma.

Es recomendable la colocación de felpudos, que deberán permanecer limpios, en las entradas a los lugares pavimentados, ya sea desde la calle, terrazas o jardines, para evitar la entrada de elementos abrasivos. Se recomienda especial cuidado en zonas cercanas a playas u obras que pueden aportar arenas y piedras.

Es aconsejable poner protecciones a los objetos que por arrastre pudieran marcar el producto (patas metálicas de mesas, sillas, etc.), teniendo especial rigurosidad con productos brillantes y satinados.

Si la suciedad no se elimina completamente, facilitamos la siguiente tabla, donde se encuentran los agentes limpiadores adecuados para cada tipo de suciedad:

TIPO DE MANCHA	AGENTE DE LIMPIEZA
Aceite, Tinta, Rotulador, Tomate, Frutas, Chocolate, Grasa	Disolvente orgánico: alcohol, aguarrás o acetona Detergente alcalino ya sea en líquido o en polvo Bicarbonato
Alquitrán, Caucho, Betún, Pintura, Graffiti, Cera, Resinas, Rotulador, Esmalte de uñas	Disolvente orgánico: alcohol, aguarrás o acetona
Café, Helado, Nicotina, Vino	Detergente alcalino ya sea en líquido o en polvo
Cal, Cemento, Cerveza, Depósitos metálicos, Refrescos, Zumos	Ácidos diluidos: vinagre, sulfamán o ácido clorhídrico
Cola, Goma de mascar, Goma de neumático o zapato	Disolvente orgánico: alcohol, aguarrás o acetona Ácidos diluidos: sulfamán o ácido clorhídrico
Sangre, Mercromina, Yodo	Oxidante: Agua oxigenada
Incrustaciones	Agua a presión

Nunca hay que utilizar productos que contengan fluorhídrico, sólo los indicados en la tabla anterior.

Todos los productos indicados en la tabla se pueden encontrar fácilmente en droguerías y centros comerciales habituales.

#### Especial para porcelánicos pulidos:

Una vez instalado todo el material y habiendo limpiado los restos de cemento, rejuntado y cualquier material de obra, en algunos productos pulidos, debido al tratamiento superficial de inertización "anti manchas" que se le realiza, puede observarse la presencia de una película "grasa" en la superficie de las piezas. En caso de presentarse esta situación, Roca recomienda la limpieza de la superficie con productos de limpieza en seco (detergentes en polvo), y una vez eliminada esa fina película protectora proceder a la limpieza del producto de la forma anteriormente indicada. Por otro lado, en condiciones extremas de iluminación se pueden producir reflejos y sombras debido al alto grado de brillo y las características del producto.

Se recomienda limpiar las manchas de forma inmediata.

To maintain the beauty and elegance of Roca tiles, we advise daily cleaning with conventional methods.

To remove remains of dust and solids: sweeping or vacuum cleaning.

Do not use dust-catcher mops with silicones and waxes.

The surface must be washed with neutral soap and the amount of hot water recommended by the manufacturer.

Do not use cleaning products containing wax, brighteners or similar additives, since in time they may leave a waterproof layer on the tile which alters its surface appearance.

We strongly recommend the use of doormats, which must remain clean, in entrances to tiled areas, whether from the street, terrace or garden, to prevent the entry of abrasive elements. We recommend special care in zones close to beaches or construction works, where there is a risk of sand and stones being brought in.

It is advisable to place protections on objects which can mark the tiles if dragged (metal table legs, chairs, etc.), being especially careful with shiny and satin-finished products.

If the tiles cannot be cleaned completely, we provide the following table showing suitable cleaning agents for each type of dirt:

TYPE OF STAIN	CLEANING AGENT
Oil, ink, marker pen, tomato, fruit, chocolate, grease	Organic solvents: alcohol, turpentine, acetone Alkaline detergents in liquid or powder form Bicarbonate
Tar, rubber, shoe polish, paint, graffiti, wax, resins, marker pen, nail varnish	Organic solvents: alcohol, turpentine, acetone
Coffee, ice cream, nicotine, wine	Alkaline detergents in liquid or powder form
Lime, cement, beer, metal deposits, soft drinks, fruit juices	Diluted acids: vinegar, hydrochloric acid
Glue, chewing gum, tyre or shoe rubber	Organic solvents: alcohol, turpentine, acetone Diluted acids: hydrochloric acid
Blood, mercromina, iodine	Oxidant: oxygenated water
Incrustations	Pressurized water

Never use any products containing hydrofluoric acid, only those indicated in the table above.

All the products shown in the table can easily be found in ordinary household stores and shopping centres.

#### Special for polished porcelain tiles:

In the case of polished porcelain tiles, once all the material has been laid and the remains of cement, pointing and any other building material have been cleaned off, on some polished surfaces the presence of an 'oily' film can be observed due to the 'stain-resistant' inertisation treatment they are given. If this occurs, Roca recommends cleaning the surface with dry cleaning products (detergents in powder form) and, once this fine protective film has been eliminated, cleaning the tiles as indicated above. In extreme lighting conditions, light reflections may occur due to the high degree of brightness and the characteristics of the product.

We recommend removing stains immediately.

## MANIPULACIÓN

1 Para desplazar y levantar las cajas de producto thinbig®, se recomienda utilizar carretillas elevadoras, cogiendo las cajas centradas por el lado largo. Si la caja se coge por el lado corto se recomienda utilizar palas de 2,5m de longitud, y si se coge por el lado largo, usar palas de al menos 1,20m.

Para evitar que la caja flexe y se pueda partir el producto, hay que separar las palas al máximo.

2 La manipulación de la placa se efectuará siempre con las cajas cerca de la superficie arevestir, con la ayuda de otra persona (nuncasolo), sosteniéndola por la parte superior y manteniéndola recta con las esquinas protegidas de golpes accidentales. Si no se hace correctamente, se pueden generar fisuras en la pieza, que posteriormente derivarán en una rotura. Una alternativa de manipulación manual más robusta, se consigue con ventosas dobles apoyadas en un bastidor (este equipo se puede adquirir en tiendas especializadas de materiales de construcción). Con esta herramienta se evitan flexiones en la pieza.

3 Apoyar la pieza thinbig® sobre el lado largo y colocarla siempre sobre material blando (poliestireno, goma, madera,...) adecuadamente separado. Colocarla con un ángulo aproximado de 30° contra la pared.

4 Para el almacenamiento en horizontal, apoyar la pieza sobre la mesa de trabajo evitando así que se curve. Es muy importante asegurarse de que la superficie esté limpia y sea plana, sino, puede ser la causa de rotura de piezas al efectuar cortes o perforaciones.

Para su manipulación manual, llevar siempre guantes de protección y antideslizantes, así como calzado de seguridad.

## HANDLING

1 We recommend the use of a fork-lift to move and lift the boxes with thinbig® product, taking the centred boxes from the long end. If the box is taken from the short end we recommend the use of 2.5-metre long forks and if it is taken from the long end, then the fork should be at least 1.2 metres long.

To prevent the box from bending, causing the breaking of the product, the forks should be separated to the maximum.

2 The handling of the plate will always be carried out with the boxes close to the surface to be covered, with the help of someone else (never alone), holding the upper section and keeping it straight, with the corners well protected against accidental impacts. If this is not done properly, cracks might appear in the piece, which will later originate breakages.

A more robust option to handle the piece manually can be achieved with double suction clamps placed on a frame (this equipment may be purchased in points of sale specialising in building materials). The flexion of the pieces is achieved with this tool.

3 Rest the thinbig® piece on the long side and place it always on soft material (polystyrene, rubber, wood...) with enough separation. Place it against the wall at an approximate angle of 30°.

4 To store it horizontally, rest the piece on the worktop avoiding its bending. It is very important to ensure that the surface is clean and that it is even; otherwise it might cause the breakage of pieces when cutting or drilling.

Always wear protective anti-slip gloves when handling the pieces manually, as well as safety footwear.

## Información técnica de Thinbig®

Thinbig® technical information

### CORTE Y PERFORADO

Las placas thinbig® se pueden perforar fácilmente con herramientas diamantadas utilizadas normalmente para trabajar el vidrio y el gres porcelánico, en seco o con agua. Disponer de una superficie de trabajo limpia y plana antes de proceder a cualquier manipulación.

1. Cortes lineales: se pueden utilizar cortavidrios o cortadoras de raíl del tamaño adecuado al corte. Se debe cortar la superficie de la pieza de un extremo a otro, sin detener el corte y siempre con una presión uniforme. Una vez efectuada la incisión se ejerce una leve presión sobre las dos partes.
2. Orificios: si el orificio es < 10 mm. de diámetro se debe utilizar el taladro eléctrico a una velocidad baja de rotación. No hay que ejercer una elevada presión sobre la superficie de la pieza. Para orificios > 10 mm. de diámetro se deben utilizar coronas perforadoras. Se recomienda también la realización de radios en las esquinas para evitar roturas por tensiones.
3. Cajeados de luz, enchufes...: perforar los orificios con las puntas de taladro en los vértices de la apertura que se desea realizar y posteriormente utilizar una cortadora eléctrica con discos diamantados de banda continua para las líneas rectas.
4. Para un correcto acabado hay que evitar los bordes afilados. Rematar los bordes con una lija abrasiva.

### RECOMENDACIONES DE COLOCACIÓN

Una colocación adecuada y cuidadosa de los productos thinbig® es vital para hacer resaltar al máximo las características técnicas de los mismos. Por este motivo, es necesario:

#### Previo a la colocación:

1. Verificar el calibre, tono y calidad del producto, antes de la colocación.
2. Escoger herramientas de instalación adecuadas (llana dentada, ventosa y llana de goma para la aplicación de la junta).
3. Que la superficie sobre la cual vaya a instalarse el material esté nivelada, limpia y aislada de la humedad, si no, se pueden crear bolsas de aire en la colocación y generar fisuras durante su uso.
4. Prestar especial atención al tipo de adhesivo a utilizar (consultar con el proveedor habitual de adhesivos), dado que cada tipo de cerámica requiere el adhesivo adecuado (norma de referencia: EN-1348). Se recomienda usar productos de resina epoxi.
5. Se recomienda el uso de sistemas nivelados como campanas o cuñas para garantizar una correcta colocación.
6. El profesional responsable de la colocación del material, debe elegir adecuadamente las juntas entre piezas, así como las juntas perimetrales, de manera que se garantice una correcta absorción de movimientos estructurales, y una compensación de tolerancias dimensionales del producto.

Roca Cerámica recomienda colocar este producto con una junta mínima de 2 mm. para interiores y 5 mm. para exteriores y comprobar si en la caja hay otras indicaciones (medidas entre calibres o junta recomendada).

#### Colocación:

1. Aplicar el adhesivo con un doble encolado sin dejar huecos, primero en el reverso de la pieza con una llana de dientes planos de 3 mm. y a continuación en el soporte con una llana de dientes inclinados de 6 mm., procurando cubrir también las esquinas y los bordes para evitar vacíos de aire entre el soporte y la pieza.
2. No aplicar el adhesivo sobre superficies de soporte extensas para evitar pérdidas de aire. Comprobar siempre la perfecta adhesión de las esquinas y aristas. No pisar el pavimento después de la colocación respetando los tiempos indicados por el fabricante del adhesivo.
3. Golpear suavemente la superficie procurando así eliminar los huecos y burbujas de aire. Comprobar siempre la perfecta adhesión de las esquinas y aristas. No pisar el pavimento después de la colocación respetando los tiempos indicados por el fabricante del adhesivo.
4. No se debe utilizar junta de color que contenga negro de humo (carbón micronizado) ni tintes que pueden dificultar la limpieza de la superficie revestida.
5. Limpiar los restos de rejuntado de la superficie de las placas porcelánicas cuando aún están frescos, utilizando una esponja con agua limpia; en ningún caso deben utilizarse materiales que presenten alta dureza y puedan

### CUTTING AND DRILLING

The thinbig® plates may be drilled easily with diamond tools normally used to work with glass or porcelain stoneware, in dry conditions or with water. Make sure the work surface is clean and even before handling the piece.

- 01 Linear cutting: glass cutters or power cutters with the suitable size for cutting may be used. The surface of the piece should be cut from one end to the other, without stopping the cutting procedure and always applying uniform pressure. Once the incision has been made slight pressure should be applied to both pieces.
- 02 Holes: If the hole is < 10mm diameter then the power drill should be used with a low rotation speed. High pressure should not be applied on the surface of the piece. Hole saws should be used for holes > 10mm diameter. We recommend the implementation of radii on the corners to avoid breakages due to strain.
- 03 Light mortising, sockets...: drill the holes with the drill tips on the corners of the opening that needs to be done and after that use a power drill with diamond discs with a continuous band for straight lines.
- 04 Sharp edges need to be avoided to obtain a perfect finish. Finish the edges with abrasive sandpaper.

### LAYING INSTRUCTIONS

An adequate and careful laying of the thinbig® products is essential to maximise their technical features. For this reason it is necessary to:

#### Prior to laying:

Verify the calibre, hue and quality of the product before laying.

2. Choose adequate installation tools (toothed trowel, suction grip and rubber trowel for pointing).
3. Ensure that the surface on which the material is to be laid is level, clean and insulated from dampness, otherwise, air pockets can originate during laying that might generate cracks during use.
4. Pay special attention to the type of adhesive to be used (check with your usual supplier of adhesive), as each type of ceramic requires the adequate adhesive (standard of reference: EN-1348). We recommend the use of products with epoxy resin.
5. We recommend the use of levelling systems such as wedges to ensure a correct laying.
6. The professional responsible for laying the material should choose the appropriate joints between pieces, as well as the perimeter joints in order to guarantee the correct absorption of structural movements and an allowance for dimensional tolerances of the product.

Roca Cerámica recommends laying this product with a minimum joint of 2 mm. for indoors and 5 mm. for outdoors and checking if there are other instructions in the box (measurement between calibres or recommended joint).

#### Laying:

1. Apply the adhesive with a double glue technique without leaving any gaps, first on the back of the piece with a 3mm notch trowel and later on the support with a 6 mm slanted notch trowel, trying to cover the corners and the edges as well to avoid air pockets between the support and the piece.
2. Do not apply the adhesive on very large surfaces to avoid the loss of adhesion due to drying. The lines of the trowel, both on the piece and on the support, should all have the same direction in order to facilitate the air flow.
3. Hit gently the surface to eliminate gaps or air bubbles. Always check the perfect adhesion of the corners and edges. Do not step on the floor tiles right after laying, respecting the time indicated by the manufacturer of the adhesive.
4. Do not use coloured pointing material containing black smoke (micronized carbon) or dyes which can hamper the cleaning of the covered surface.
5. Clean off excess pointing material from the surface of the tiles when it is still fresh, using a sponge and clean water; never use hard materials that could scratch the ceramic product such as metal spatulas or abrasive scourers. Always follow the instructions of the manufacturer of adhesives.
- 6 Once the tiles are laid, avoid working in the tiled zone (plastering, painting, placing scaffolds or ladders, projecting metallic fragments from disc grinders,

rayar el producto cerámico tales como espátulas metálicas o estropajos abrasivos. Siempre se deben seguir las recomendaciones indicadas por el fabricante de adhesivos.

6. Una vez colocada la placa cerámica, hay que evitar las operaciones en la zona alicatada (enyesado, pintura, colocación de andamios o escaleras, proyección de restos metálicos de radiales, trasiego de herramientas, arrastre de objetos pesados, resto de materiales abrasivos de obra, etc.), en caso contrario, siempre hay que proteger las placas y las juntas para evitar posteriores problemas de limpieza o deterioro. El material que se use para esta protección, no debe dañar ni contener productos químicos que dañen al azulejo.

### MANTENIMIENTO Y LIMPIEZA

Para mantener la belleza y elegancia de la cerámica Roca, se aconseja la limpieza periódica del material con sistemas convencionales. Para la eliminación de restos de polvo y sólidos: por barrido o aspiración. No se deben utilizar mopas atrapa-polvo con siliconas y ceras. El lavado de la superficie se debe realizar con jabón neutro y la cantidad de agua caliente recomendada por el fabricante. No se deben usar productos de limpieza abrillantadores, cerosos o con aditivos similares ya que con el paso del tiempo pueden dejar una capa impermeabilizante sobre la cerámica que altera el aspecto superficial de la misma. Es recomendable la colocación de felpudos, que deberán permanecer limpios, en las entradas a los lugares pavimentados, ya sea desde la calle, terrazas o jardines, para evitar la entrada de elementos abrasivos. Se recomienda especial cuidado en zonas cercanas a playas u obras que pueden aportar arenas y piedras. Es aconsejable poner protecciones a los objetos que por arrastre pudieran marcar el producto (patas metálicas de mesas, sillas, etc.), teniendo especial cuidado con productos brillantes y satinados. Si la suciedad no se elimina completamente, facilitamos la siguiente tabla, donde se encuentran los agentes limpiadores adecuados para cada tipo de suciedad:

TIPO DE MANCHA	AGENTE DE LIMPIEZA
Aceite, Tinta, Rotulador, Tomate, Frutas, Chocolate, Grasa	Disolvente orgánico: alcohol, aguarrás o acetona  Detergente alcalino ya sea en líquido o en polvo  Bicarbonato
Alquitrán, Caucho, Betún, Pintura, Graffiti, Cera, Resinas, Rotulador, Esmalte de uñas	Disolvente orgánico: alcohol, aguarrás o acetona
Café, Helado, Nicotina, Vino	Detergente alcalino ya sea en líquido o en polvo
Cal, Cemento, Cerveza, Depósitos metálicos, Refrescos, Zumos	Ácidos diluidos: vinagre, sulfamán o ácido clorhídrico
Cola, Goma de mascar, Goma de neumático o zapato	Disolvente orgánico: alcohol, aguarrás o acetona  Ácidos diluidos: sulfamán o ácido clorhídrico
Sangre, Mercromina, Yodo	Oxidante: Agua oxigenada
Incrustaciones	Agua a presión

Nunca hay que utilizar productos que contengan fluorhídrico, sólo los indicados en la tabla anterior.

Todos los productos indicados en la tabla se pueden encontrar fácilmente en droguerías y centros comerciales habituales.

#### Especial para porcelánicos pulidos:

Una vez instalado todo el material y habiendo limpiado los restos de cemento, rejuntado y cualquier material de obra, en algunos productos pulidos, debido al tratamiento superficial de inertización "anti manchas" que se le realiza, puede observarse la presencia de una película "grasa" en la superficie de las piezas. En caso de presentarse esta situación, Roca recomienda la limpieza de la superficie con productos de limpieza en seco (detergentes en polvo), y una vez eliminada esa fina película protectora proceder a la limpieza del producto de la forma anteriormente indicada. Por otro lado, en condiciones extremas de iluminación se pueden producir reflejos y sombras debido al alto grado de brillo y las características del producto.

Se recomienda limpiar las manchas de forma inmediata.

moving tools, dragging heavy objects, moving remains of abrasive building materials, etc.). If this cannot be avoided, always protect the tiles and joints to avoid subsequent cleaning or deterioration problems. The material used for this protection should not be harmful nor should it contain chemical agents that might damage the tiling.

### MAINTENANCE AND CLEANING

To maintain the beauty and elegance of Roca tiles, we recommend the daily cleaning of the material using conventional procedures.

To remove remains of dust and solids: sweeping or vacuum cleaning.

Do not use dust-catcher mops with silicone or wax.

The cleaning of the surface should be carried out with neutral soap and the amount of water recommended by the manufacturer.

Do not use cleaning products containing wax, brighteners or with similar additives as they may leave a waterproof layer on the tile over time that will affect its surface appearance.

We recommend the use of doormats, which should remain clean, in the entrances to tiled areas, either from the street, terraces or gardens, to avoid the entrance of abrasive elements. Special care should be taken in areas close to beaches or construction works, as sand or stones might be brought in.

We recommend placing protections on the objects that might damage the tile when dragged (metallic legs of tables, chairs, etc.), being especially rigorous with gloss and satin finished products.

Should the dirt not be removed entirely, we provide the following chart, where you may find the suitable cleaning agents for each type of dirt:

TYPE OF STAIN	CLEANING AGENT
Oil, ink, marker pen, tomato, fruit, chocolate, grease	Organic solvents: alcohol, turpentine, acetone Alkaline detergents in liquid or powder form Bicarbonate
Tar, rubber, shoe polish, paint, graffiti, wax, resins, marker pen, nail varnish	Organic solvents: alcohol, turpentine, acetone
Coffee, ice cream, nicotine, wine	Alkaline detergents in liquid or powder form
Lime, cement, beer, metal deposits, soft drinks, fruit juices	Diluted acids: vinegar, hydrochloric acid
Glue, chewing gum, tyre or shoe rubber	Organic solvents: alcohol, turpentine, acetone Diluted acids: hydrochloric acid
Blood, mercromina, iodine	Oxidant: oxygenated water
Incrustations	Pressurized water

Never use any products containing hydrofluoric acid, only those indicated in the table above.

All the products in this table may be easily found in ordinary household stores and shopping centres.

#### Specially indicated for polished porcelain tiles:

Once the entire material has been laid and the remains of cement, pointing and other building material have been cleaned, on some polished surfaces the presence of an "oily" film can be observed due to the "stain-resistant" inertisation treatment they are given. Should this occur, Roca recommends the cleaning of the surface with dry-cleaning products (powder detergents), and once that fine protective layer has been removed, then clean the product as indicated previously. In extreme lighting conditions, light reflections might occur due to the high degree of brightness and the features of the product.

We recommend cleaning stains immediately.
